

## FINANCING

GHED 2019

### PHC spending:

### Prioritization of PHC:

Overall health spending<sup>8</sup>

Government health spending<sup>9</sup>

### Sources of PHC spending:

## CAPACITY

Primary Health Care Progression Model<sup>11</sup>

### Governance

### Inputs

### Population Health & Facility Management

## PERFORMANCE

### Access Index

Demographic and Health Survey (DHS) (2019-2020)

### Quality Index<sup>12</sup>

SARA (2019), DHS (2019-2020), WHO TB Country Profile (2021), Patient Satisfaction Survey (2018)

### Service Coverage Index

DHS (2019-2020), WHO TB Country Profile (2021), UHC Global Monitoring Report (2021)

## EQUITY

### Access: % with perceived barriers due to cost, by wealth quintile

DHS (2019-2020)

### Coverage of RMNCH<sup>13</sup> services, by mother's education

DHS (2019-2020)

### Outcomes: Under-five mortality, by residence

DHS (2019-2020)

## COUNTRY CONTEXT AT-A-GLANCE

**GDP per capita<sup>1</sup>**

(PPP int'l dollars)  
WDI (2021)

**\$2,434**

**Living in poverty<sup>2</sup>**

(Under \$2.15 int'l dollars / day)  
WDI (2015)

**13%**

**Government health spending as % of GDP<sup>3</sup>**

WHO GHED (2019)

**1%**

**Life expectancy at birth**

(Years)  
WHO (2019)

**66**

**Maternal mortality<sup>4</sup>**

(Per 100,000 live births)  
WHO est. (2017)

**597**

**Neonatal mortality<sup>5</sup>**

(Per 1,000 live births)  
WHO est. (2020)

**26**

**Premature NCD mortality<sup>6</sup>**

(Probability)  
WHO est. (2019)

**21%**

**Causes of death**

WHO est. (2019)

Note: Indicator values presented here may differ from country data sources due to the use of standardized categories and methods to enhance international comparability. See Indicator Description Sheet for details.

Note: Scores for the Capacity, Performance, and Equity domains are color-coded to reflect good (green), medium (yellow), and poor (red) performance, where comparable data are available. Cut-offs can be found in the Indicator Description Sheet. Scores based on data from non-comparable sources are colored gray. Finance indicators are not color-coded because these indicators lack common targets. Last updated 12/2022

1. Country provided value: \$2231, BGoS 2021

2. Poverty data expressed in 2017 Purchasing Power Parity (PPP) prices, reflecting the recent change in the World Bank estimation and reporting methodology

3. Domestic general government health expenditure as % of gross domestic product. Country provided value: 1.7%, National Health Accounts 2017

4. Country provided value: 289, Demographic and Health Survey 2019-2020

5. Country provided value: 29, Demographic and Health Survey 2019-2020

6. Probability of dying between ages 30 and 70 from cardiovascular diseases, cancer, diabetes, or chronic respiratory disease

7. Communicable, maternal, perinatal and nutritional conditions

8. Current PHC expenditure as % of Current Health Expenditure (CHE)

9. Domestic general government PHC expenditure as % of domestic general government health expenditure

10. Domestic general government PHC expenditure as % of current PHC expenditure

11. The PHC Progression Model uses mixed methods to assess foundational capacities of PHC on a scale from 1 (low) to 4 (high)

12. Because different data/indicators are used in each country, composite index values may not be comparable across countries.

13. The composite coverage index is a weighted score reflecting coverage of eight RMNCH interventions along the continuum of care

Tuberculosis cases detected and treated with success		50%	WHO TB country Profile	2021
People living with HIV receiving anti-retroviral treatment		31%	UHC Global Monitoring Report	2021
Use of insecticide-treated nets (ITN) for malaria prevention		38%	DHS STATcompiler	2019-2020
Children under 5 with diarrhea receiving ORS		44%	DHS STATcompiler	2019-2020
<b>Non-Communicable Diseases (NCDs)</b>				
% of population with normal blood pressure***		38%	UHC Global Monitoring Report	2021

\*Indicators where lower values are preferable were transformed before inclusion in the index. The modified indicator was defined as 100-X, where X is the original percentage shown in this table. \*\*Country-specific (proxy) indicator, used in absence of globally comparable survey data. \*\*\*Percentage of adult population with normal blood pressure is based on age-standardized estimates. These distributions are rescaled to provide finer resolution before inclusion in the index. Rescaled indicator =  $(X-40)/(100-40)*100$ , where X is the prevalence of normal blood pressure. For more details see Tracking UHC: 2021 Global Monitoring Report. Note: Summary scores for the domains of Access, Quality, and Coverage are calculated by taking the average of indicator values within each subdomain, and then taking the average across subdomain scores.
