Causes of death

IHME (2019)

Note: Scores for the Capacity, Performance, and Equity domains are color-coded to reflect good (green), medium (yellow), and poor (red) performance, where comparable data are available. Cut-offs can be found in the Indicator Description Sheet. Scores based on data from non-comparable sources are colored gray. Finance indicators are not color-coded because these indicators lack common targets.

Indicator values presented here may differ from country data sources due to the use of standardized categories and methods to enhance international comparability. See indicator Description Sheet for details.

References

1. Domestic general government health expenditure as % of gross domestic product
2. Probability of dying between ages 30 and 70 from cardiovascular diseases, cancer, diabetes, or chronic respiratory disease
3. Communicable, maternal, perinatal and nutritional conditions
4. Current PHC expenditure as % of Current Health Expenditure (CHE)
5. Domestic general government PHC expenditure as % of domestic general government health expenditure
6. Domestic general government PHC expenditure as % of current PHC expenditure

7. The PHC Progression Model uses mixed methods to assess foundational capacities of PHC on a scale from 1 (low) to 4 (high)

8. Because different data/indicators are used in each country, composite index values may not be comparable across countries. See page 2 for the specific indicators used in this VSP.

9. The composite coverage index is a weighted score reflecting coverage of eight RMNCH interventions along the continuum of care

| Percentage of children age 9-35 months given vitamin A supplementation in last 6 months‡ | | 86% | NFHS-5 | 2019-21 |
| Percentage of target of children 0-5 years screened for Severe Acute Malnutrition (SAM)‡ | | 72% | Gujarat Routine Monitoring System | 2022-23 |

*Indicators where lower values are preferable were transformed before inclusion in the index. The modified indicator was defined as 100-X, where X is the original percentage shown in this table. †Country-specific (proxy) indicator, used in absence of globally comparable survey data or based on State measurement priorities. § Indicators where data is not yet available, but the State has identified as an aspirational indicator for future collection with no specified year. Note: Summary scores for the domains of Access, Quality, and Coverage are calculated by taking the average of indicator values within each subdomain, and then taking the average across subdomain scores. † Note on NQAS data: NQAS data has been omitted from VSP score calculations due to limited availability across PHCs and SCs (20 PHCs and 126 SCs). **Note on HMIS data quality: HMIS data has been omitted from VSP score calculations due to variations in indicator quality monitoring and potential comparability issues over time.
